

In Muslim society, the AZAN call holds significant importance as it signals the designated prayer times for devotees. Occurring five times a day, the accuracy of the AZAN timing is crucial. Currently, the common method involves assigning a staff member as the timekeeper. When the prayer time arrives, this individual must leave their desk, proceed to the control room, operate the PA System panels, trigger a message player for the AZAN call, stop the message, reset the PA system panel zones, and then return to their desk.

However, several issues arise with this approach. Firstly, the assigned staff may not be available on a given day. Secondly, they might be occupied with work or meetings, potentially missing the correct timing. Thirdly, the manual nature of this task consumes the staff's time and may hinder their office efficiency. Additionally, reliance on the staff member's watch or phone app can lead to inaccuracies in timing.

To address these challenges, AEX SYSTEM's Nebulax Series Azan Box offers a solution. This cloud-based system is fully automated, eliminating the need for human intervention. The timing is precise, synchronized with the world atomic clock, ensuring 100% accuracy. The system calculates prayer times based on geographical location, providing a reliable alternative to the current manual method.

The Nebulax Series Azan Box is applicable in various settings, including government offices, public buildings (such as JPJ and libraries), government hospitals, Urban Transformation Centers (UTC), and markets. Its cloud-based nature ensures continuous real-time updates and accuracy, irrespective of the user's location, surpassing the limitations of traditional wall clocks that may experience timing drift over time.

- 5 times a day Azan Reminder
- Just Plug & Play
- Pre-azan notification
- World wide time zone
- Easy to configure
- Programs & data stored in Cloud
- Accurate Timing

**ANS 601**

Technical Specification

	ANS 601
Audio Output	1 no. 0 dB Mono Balanced (panel feedthrough)
Frequency Response	20 Hz ~ 20 kHz
Messages	3 pre-recorded messages (Subuh, Asar, pre-call reminder)
Audio Decoding Formats	MP3
Controls	1 no. Control Out
Networking	10/100 Mbit Ethernet
Application Interface	VectusNet Platform
Power Requirement	24 Vdc, 1 A Power Adaptor
Material & Finish	ABS Black
Dimensions	169 x 51.6 x 124 mm (W x H x D)

AZANBOX | Azan Service Management

Seamlessly connect and control your ANS 601 Azan Box from your mobile device. The Azanbox App brings convenience and precision to your prayer time management, ensuring that you never miss the time.

Easy to Manage: With a user-friendly interface and intuitive controls, the Azanbox App makes managing your prayer times a breeze. Customize your Azan settings and prayer time notifications with ease, all from the palm of your hand.

Seamless Connection: Experience a smooth and uninterrupted connection to your ANS 601 Azan Box. The app guarantees precise prayer time notifications.

Stay Up to Date: Our Azanbox App ensures you stay informed and up-to-date with the latest prayer times. It synchronizes with the world atomic clock, providing you with the most accurate and reliable prayer time information, no matter where you are.

Worry-Free, One-Time Setup: Set up your prayer time preferences once, and the Azanbox App takes care of the rest. You can enjoy a worry-free experience, as the app manages your prayer times effortlessly. Simply set it and forget it.
